

# Central Lab & Biobanking Services

Precursion provides integrated sample management for clinical and research studies, from study setup and logistics to processing, extraction and secure biobanking, with tailored biospecimen sourcing when required.

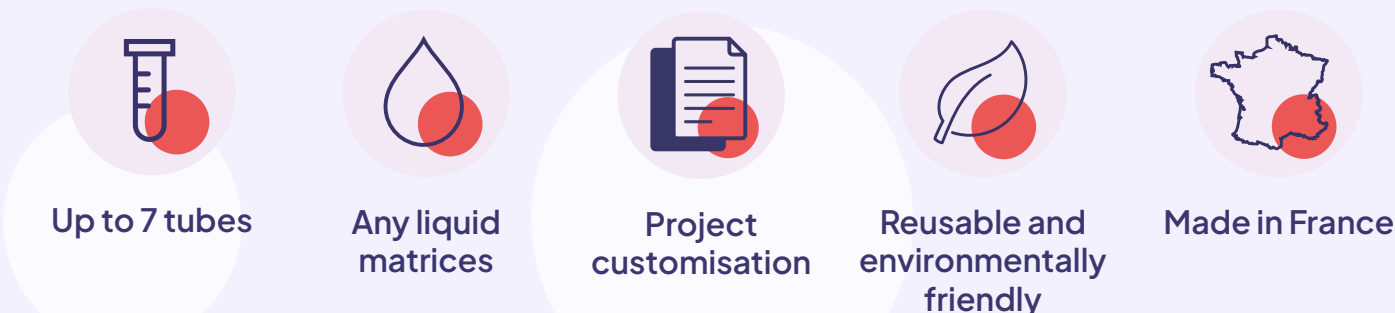

## Our Central Lab Workflow

Our coordinated workflow combines standardized procedures and full traceability to ensure consistent sample management from study setup to long-term storage. Throughout your study, **our proprietary user interface** provides clear visibility into sample tracking and Central Lab activities.

## Customized Sampling Kits

Our customized Sampling Kits support standardized sample collection across study sites, helping ensure consistent sample handling from collection to laboratory reception. Kits are configured according to study-specific requirements.

# Biobanking & Sample Management

Our biobanking facility ensures secure storage and sample management, preserving sample integrity and traceability throughout your study. Controlled storage conditions, continuous monitoring and a robust LIMS ensure full traceability from reception to retrieval.

**-150°C to +25°C**  
Controlled storage conditions

**24/7 Monitoring**  
Temperature tracking with alarm management

**Secure Access**  
Controlled access and confidentiality

**Full Traceability**  
Real-time tracking from reception to retrieval

## DNA, RNA & Protein Extraction Services

We provide high-quality DNA, RNA and protein extraction using manual and automated workflows. Extraction protocols are adapted to your sample type, downstream application, sample volume and required yield, ensuring the preservation of sample quality and integrity.

**Blood**  
Whole blood, plasma and serum samples

**Tissue**  
Fresh, frozen or FFPE tissue sections

**Cells**  
Culture or isolated cell populations

**Other matrices**  
Exosomes and other sample types upon request

## Biospecimens for your Studies

To meet the specific needs of clinical and research studies, we provide access to prospective and retrospective human biospecimens. Our network of qualified partners across Europe, the US and Asia also provides relevant clinical and sample-associated data.

### Global sourcing network

Partners across Europe, the US and Asia

### Study-specific sourcing

Tailored to sample availability and study requirements

### Relevant clinical data

Access to associated clinical and sample data according to your project

## Quality & Compliance

Our biobanking and laboratory services are supported by a robust quality and compliance framework.
